(54) HIGHLY STABLE THIN PLATE, A VULCANIZING MOLD WITH SUCH THIN PLATE AND AUTOMOBILE TIRE HAVING TREAD WITH CUT MADE OF SUCH THIN PLATE

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a thin plate annexed to a vulcanizing mold to form cuts in a tread on an automobile tire.

SOLUTION: A thin plate 1 includes an uplift and a depression having a height/depth (Zt) located between the height (Zg) of a peak and the depth (Zk) of a crater, preferably at a middle, and a pitch line T arranged in two groups, the pitch line T extending in mutual parallel inward of each group and crossing the pitch line T of different groups. The pitch line T is arranged not only in two groups but also in three groups, the pitch line T of the different groups crossing each other at a angle of about 60 degrees to form lattices of approximately equilateral triangle.
